

Why do we crop images?

1. Generally to fill the frame with the subject
2. Eliminate distractions
3. Create balance
4. Straighten horizons
5. Leave room in front of a moving object
6. To make it fit the space we have in a layout
7. To make a face easier to see on a cramped web page
8. To stay up to date with our designs
9. To save some good part of a bad image

When do we crop images?

Almost always!
