DESN 368 Quiz 4 Nov 17, 2011   Name _____KEY_____

1. What are the first steps in starting a new project in Dreamweaver?
   Create a local directory.
   Use Site > New Site and specify what the root directory will be.
   Then start your first page.

2. How do you tell Dreamweaver that you want to start an external CSS style sheet? (There are a couple steps.)
   In the CSS panel, choose New from the drop-down menu.
   Then choose the External option.
   Then you will be asked to name the external css file and specify a location for it.
   (Then create the style.)

3. In Dreamweaver, what is the difference between Block and Box properties?
   Block are paragraph related.
   Box are DIV related, including margins, padding, size and float.

4. What are three ways in Dreamweaver to apply a style, that already has been defined, to an element in the web page?
   Select the element in the design view, and use the Property panel drop-down.
   Select the element in the design view, and Right-click and choose CSS.
   Select the element in the code view, and Right-click and choose CSS.
   Type a class="style1" in the opening container tag in the code view.

5. Describe two basic ways to make a graphic-based rollover with CSS. In other words, what actually is happening?

Way 1   **Make the badground image the rollover state, and make the foreground imagedisappear on a:hover**

. . . .

Way 2   **Make the background a composite image with both states, and move a new portion of the background into view on a:hover**

6. *Here is part of the HTML code for a sliced page. Circle the code that you would most probably change if you were creating a second page with different content. In the space below write the changed code for the second page. Include brief sample content.*

```
<html> <head> <title>Home Page</title> </head> <body>  <tr>
  <td><a href="p2.html> <img src="images/AnotherSlice_01.jpg" width="150" height="100"> </a> </td>
  <td><img src="images/AnotherSlice_02.jpg" width="500" height="100"></td>
</tr>
<tr>
  <td><img src="images/AnotherSlice_03.jpg" width="150" height="600"></td>
  <td><img src="images/AnotherSlice_04.jpg" width="500" height="600"></td>
</tr></body></html>
```
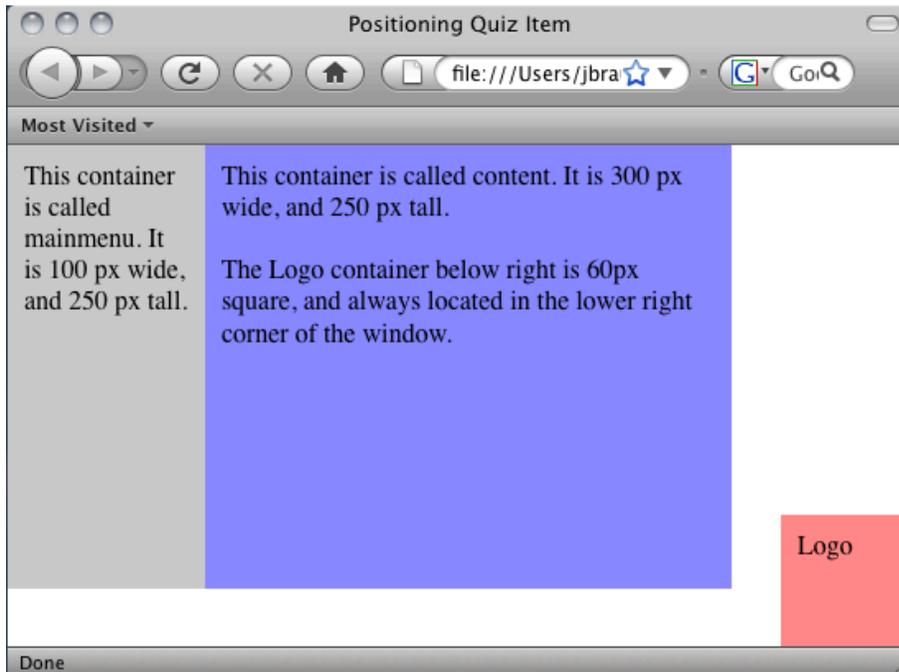

(Line 6) <td width="500" height="600"> <h1>Here is page two.</h1></td>

7. What do you do in Photoshop to get one of your slices to act as a button? (There are a couple steps.)
    Use the Select Slice tool to double-click on the slice.
    Then enter a URL in the Slice Options dialog box.

8. Write the CSS for the three containers shown. Use the position property.

html, body {margin: 0px; padding: 0px;}
body {background-color: #fff; }
div {padding: 10px;}

.mainmenu {
    background-color: #ccc; height:250px; width:100px; }

.content {
    background-color: #88f; height:250px; width:300px;
    position: absolute; top: 0px; left: 120px;}

.logo {
    background-color: #f88; height:60px; width:60px;
    position: fixed; right: 0px; bottom: 0px;}
